PROFESSIONAL SUMMARY

Full-stack software engineer and Computer Science student at Texas A&M University with hands-on experience building and shipping production web applications, AI-powered platforms, and iOS tools. Proficient in TypeScript, JavaScript, React, Next.js, and Python, with a consistent record of delivering scalable, user-facing software across real-world projects.

EDUCATION

Texas A&M University

Bachelor of Science in Computer Science.

Relevant Coursework: Data Structures, Discrete Structures for Computing, Program Design and Concepts

College Station, TX

Expected May 2027

EXPERIENCE

AI Software Engineer

Handshake

May 2025 – Present

Remote

- Designed, built, and deployed an AI-powered application to support user-facing features and drive product impact
- Developed internal tools and data-driven features to extract insights and inform product decisions
- Collaborated directly with stakeholders to translate requirements into technical features and scalable solutions

Software Engineer

Aggie Coding Club

August 2024 – May 2025

College Station, TX

- Shipped and deployed a Google Chrome extension leveraging AI to enhance user productivity
- Partnered with a team of student developers to design, build, and iterate on features throughout the year
- Contributed to code reviews, debugging, and deployment workflows to ensure a polished release

PROJECTS

Dropit.io <https://github.com/tylerp63/Drop-it>

Next.js, TypeScript, PostgreSQL, Supabase, Shadcn-UI, TailwindCSS

- Automated the product selection process across 1,000s of products by scraping Amazon data with Puppeteer, scaling to support 100+ concurrent users
- Reduced authentication latency by 50% by migrating from NextAuth to Supabase, enabling secure and efficient user management in PostgreSQL
- Saved 100s of hours in manual data retrieval by fully automating browser interactions via optimized Puppeteer scripts

StudyMonkey <https://github.com/tylerp63/Studymonkey>

Python, Streamlit, LangChain

- Built an AI-powered educational platform that transformed PDFs into interactive chat sessions and flashcards, supporting 1,100+ students
- Achieved 95% retrieval accuracy by implementing FAISS vector search with LangChain's retrieval-based Q&A pipeline
- Enabled processing of documents up to 500 pages using optimized text chunking with PyPDF2 and RecursiveCharacterTextSplitter

VitalEdge <https://github.com/tylerp63/vital-edge>

SwiftUI, iOS, SmartSpectra SDK

- Integrated a third-party biometric SDK (remote PPG) into a SwiftUI iOS application to stream heart rate, HRV (RMSSD), and breathing rate in real time
- Designed and implemented a weighted recovery scoring algorithm using z-score normalization to convert raw physiological signals into actionable readiness metrics
- Architected centralized state management and API-failure fallbacks to eliminate redundant computation and ensure deterministic behavior during live biometric streaming

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Java, C++, HTML, CSS

Frameworks: React, Next.js, Node.js, TailwindCSS, LangChain, Streamlit, React Native, Expo

Developer Tools: PostgreSQL, Supabase, Prisma, Vercel, Puppeteer
